

REACH – Regulation

Based on the information currently available, it can be assumed that our products generally comply with the requirements of Regulation (EC) No 1907/2006 (REACH).

However, certain metallic raw materials, particularly brass, steel, cast iron and stainless steel, may contain lead due to the nature of the material or alloy. Consequently, the threshold value of 0.1% by weight **may be exceeded**. Lead is classified as a substance of very high concern (SVHC) in accordance with the REACH Candidate List.

We are therefore fulfilling our duty to provide information. As the content of an SVHC exceeds the threshold value of 0.1% by weight, we have a duty to provide information to professional users in accordance with Article 33 of the REACH Regulation. This information must include the name of the substance and be detailed enough to enable the product to be used safely.

In principle, these products are not intended for contact with the human body.
